

## UTM Endpoint Protection

### Simplify security by managing endpoint antivirus from your UTM

Our UTM Endpoint Protection is centrally managed alongside your network protection. Keep your Windows network safe with a single endpoint agent, including antivirus, web protection and device control. The agent prevents malware and data loss with no complicated network or directory prerequisites. And, you'll get detailed reporting, giving you complete visibility and helping you clean up threats, fast.

#### Highlights

- ▶ Network and endpoint protection in one
- ▶ Automatic removal of existing antivirus on installation
- ▶ Controls USB, Bluetooth and wireless devices
- ▶ Intuitive browser-based interface
- ▶ One vendor to call for support

#### Certified malware protection that protects fast

Our quick scans don't impact users while detecting and cleaning up viruses, spyware, rootkits, Trojans, adware and potentially unwanted applications (PUAs). We stop new threats fast using a built-in host intrusion prevention systems (HIPS), our web-based script attack detection and Live Antivirus real-time lookups to SophosLabs' reputation database. And should an endpoint become infected, we inform your administrator by email to ensure a speedy clean-up.

#### Deployment made easy with flexible installation

Preconfigured installation packages detect and remove your existing antivirus and deploy our self-updating agent. Endpoints automatically register in the UTM. You can also deploy protection via USB stick, email, Active Directory GPO and standard software deployment tools. Tamper protection prevents unauthorized users and malware from uninstalling or disabling endpoint protection.

#### Reduces malware and data loss with built-in device control

You can find and block unauthorized uses of removable storage devices, optical media drives and wireless networking protocols like Wi-Fi, Bluetooth and infrared. Simply set your policy for different groups of computers—for example, allow encrypted USB keys for senior managers, and block use for everyone else.

#### Safe everywhere with Endpoint Web filtering

Web URL filtering is built-in. So, even when users are not browsing through a secure gateway, they're protected from infected and inappropriate websites, just as if they were in the office. You can sync endpoint and gateway policies or create different rules for people out of the office. Block, allow or track access to over 90 content categories.

## One console simplifies endpoint and network protection

You'll get instant visibility of the security status for all Windows computers from the same console where you manage your network protection. You also have access to detailed logs of all events like denied access, and policy tampering. And it's easy to keep track of activity with computer- and user-based reports that can be scheduled to run and automatically distributed.

## Endpoint operating systems supported

- ▶ Microsoft Windows XP SP2, Vista, 7 and 8
- ▶ Microsoft Windows Server 2003, 2008 and 2012

## Choose a hardware, virtual or software UTM

UTM hardware options for the UTM Endpoint subscription will let you support between 100 and 1000 endpoints from a single appliance.

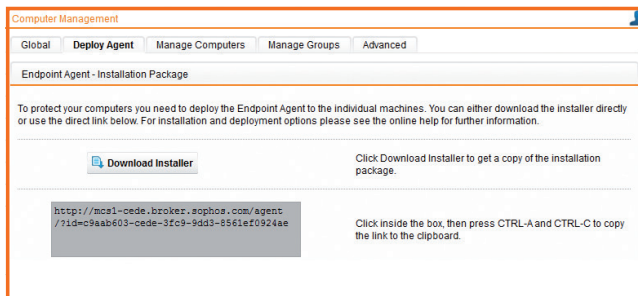

## Required subscriptions

UTM Endpoint Protection is an optional add-on that can be used with Sophos UTM subscription.

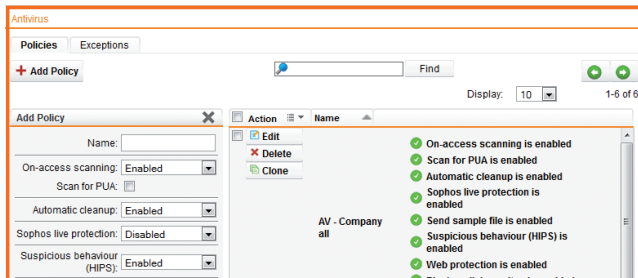

## Already using Sophos Endpoint Protection?

If you're already using the Sophos Enterprise Console you can now use Sophos UTM as a source for web policy and reporting. This allows you to take full advantage of the scalability and power of our UTM as a Secure Web Gateway.

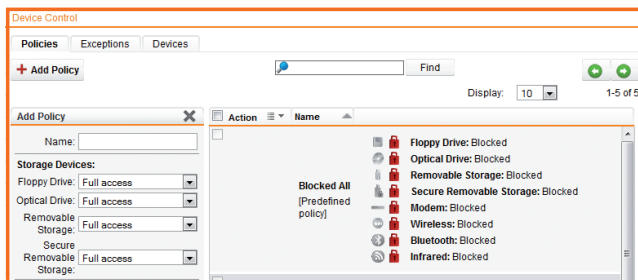

## Certified protection

Easy deployment of endpoint agents

Essential antivirus policies

Device control policies
