WatchGuard IPSec VPN Client

Connect to the network with confidence

Secure connectivity to corporate headquarters is essential if your remote employees are going to achieve maximum productivity. Organizations rely on a VPN, or Virtual Private Network, to offer that secure connection. While many VPN clients are on the market, not all offer the same level of protection and flexibility. You need a feature-rich VPN client that provides Two-Factor Authentication, Seamless Roaming, Windows Pre-logon – and more.

WatchGuard's IPSec VPN Client, compatible with Windows and Mac OS X, is a premium service that gives both the organization and its remote employees a higher level of protection and a better VPN experience.

Features & Benefits

- **Seamless Roaming –** Users can change from one Internet communication medium (LAN/WLAN/3G/4G) to another without dropping the VPN connection. For example, connect with Wi-Fi at a coffee shop, then switch to an Ethernet connection at work, then switch to your Wi-Fi at home. The VPN connection does not drop.

- **Two-Factor Authentication –** Adds another layer of security by requiring two types of credentials without the need for specialized hardware.

- **Always On –** VPN client will reconnect automatically should a connection drop. Even when the user's device goes to sleep, it will reconnect to the VPN once it's back on.

- **Windows Pre-Logon –** Users can log on to a Windows domain even if they are not in the network. For easy access, Windows and VPN log-in credentials can be configured to be the same.

- **FIPS Certified –** Incorporates cryptographic algorithms conformant to FIPS 140-2 (Certificate #1747).

- **Integrated Personal Firewall –** Our **Friendly Net Detection** feature recognizes whether a network is secure or not and then applies the appropriate firewall settings. This is especially useful in businesses like retail stores and mall kiosks that want to offer their customers a specific application.

WatchGuard offers three choices for VPN connectivity: IPSec VPN Client, Basic VPN Client, and Mobile VPN with SSL

Features	IPSec VPN Client	Basic VPN Client	Mobile VPN with SSL
Support for Mac OS	✓	—	✓
